

Peri-urban agricultural designs

Enhancement of agricultural areas for the general public's use

Comparing experiences in Italy and France

Paola Branduini and Franco Sangiorgi

THEME: managing and planning agricultural areas close to large and average-size urban settlements and problems arising from the general public's use of agricultural soil.

PROJECT: "Leonardo-mobility" called "Peri-urban Agriculture", promoted by the European Union and carried out by the Istituto di Ingegneria Agraria of the State University of Milan in collaboration with the Laboratoire d'Agriculture Périurbaine dell'Ecole Nationale Supérieure du Paysage of Versailles: thanks to this project nine Italian graduates in agrarian and architecture sciences were granted a training course in institutions in charge of the management and assessment of territorial transformations as well as in farmers' and administrators' associations both in the Paris area and in other French peri-urban territories.

REFERENCES: municipal, provincial and regional institutions, research institutions as well as local subjects such as farmers and ordinary people.
