

Conservation project of Monza Royal Gardens

Michela C. C. Brenna - Alessandro Ferrario – Paolo Maderna

THEME conservation of historic gardens

AREA Monza, Royal Gardens and Park

OBJECTIVES and PROJECT The cognitive research investigates various items such as geometry, vegetal elements, trails, water system and garden furniture. The site's architectural composition is analysed through the interpretation of tree and bush distribution, the identification of visual cones, of "green rooms" and finally of artefacts.

Identifying the problems in the conservation of the building materials as well as of the vegetal and mineral materials may provide suggestions about their ordinary maintenance.

The project also involves requalifying trails, the water system and the garden furniture with a special attention to the rehabilitation of the area west of the pond and of the visual opening towards the area outside the Royal Gardens.
