

“Wind plants: proposals for landscape design and assessment”.

Research for the Ministry of Cultural Heritage and Activities for the application of the decree of the Council of Ministers' President (DCPM 12.12.05)

GUIDELINES FOR THE INTRODUCTION OF TERRITORIAL TRANSFORMATION INTO LANDSCAPE – I VOLUME

The manual, which is the result of a work jointly carried out by MiBAC and the Polytechnic of Milan, provides a cultural contribution for drawing up guidelines as per the decree n. 387/2003 that will be jointly devised by the Ministry for the Environment, of the Economic Development and of Cultural Heritage.

The guidelines aim at simplifying the filling-in procedure of the Technical Schedule enclosed with the DPCM 12 December 2005 listing the purposes, the drawing-up criteria and contents of the Landscape Report to be presented along with the application for the landscape authorization (as provided for by art. 146, point 2, of the Code for Cultural Heritage and Landscape L.D. 22 January 2004, n. 42 and subs.amendments) and providing guidelines for the assessment of projects.

Besides dealing with various issues, the manual also provides an insight into specific issues, technical schedules as well as plenty of information about the documents drawn up both in Italy and abroad, a selected bibliography and general bibliographic references. A wide commented iconography shows case studies, technical design and representation solutions, assessment problems. Finally a list of FAQ aims at helping to build and check the various steps in the preparation of the design and in the assessment of the proposals for building wind plants.

Themes:

✓ Reading and assessing the context

- Preliminary considerations
- Investigations to be carried out
- Reading the sites' landscape characters
- Visual impact of plants on landscape

✓ Landscape design and assessment principles

✓ Landscape design for a wind plant

✓ Contributions for checking projects

- Technical studies
- Proposals from Tuscany, Scotland, France and Australia.

Anna Di Bene and Lionella Scazzosi (a cura di),
Gli impianti eolici: suggerimenti per la progettazione e la valutazione paesaggistica, published by Gangemi, Rome, 2006

Linee guida per l'inserimento paesaggistico degli interventi di trasformazione territoriale. Prima ricerca in applicazione alla “Relazione Paesaggistica” DPCM 12 December 2005

Countries studied: Australia, Italy, France, Scotland. Italian regions studied: Tuscany.
